# CARBON DIOXIDE (CO$_2$) DETECTORS w/ BACnet® or ModBus Communications
## CDD3 Series

**BTL**
BACnet • TESTING LABORATORY ®

BACnet is a registered trademark of ASHRAE. ASHRAE does not endorse, approve or test products for compliance with ASHRAE standards. Compliance of listed products to requirements of ASHRAE Standard 135 is the responsibility of the BACnet International. BTL is a registered trademark of the BACnet International.
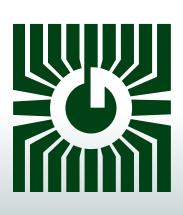

## Precision carbon dioxide control/sensing

**FEATURES:**

- BACnet®  or ModBus Communication
- BTL Listed (B-ASC)
- Optional RH and/or Temperature
- Optional Setpoint and/or Override
- Optional on-board relay
- Optional LCD display
- Custom logos available

*Peace of mind through reliable gas monitoring*

GREYSTONE HAS AN **ISO 9001** REGISTERED QUALITY SYSTEM

**GREYSTONE** ENERGY SYSTEMS INC

# CO₂ DETECTOR w/ BACnet® or ModBus Communications

## SPECIFICATIONS:

### General Specifications:

Power Supply.................................................................20-28 Vac/dc (non-isolated half-wave rectified)
Consumption.................................................................80 mA max @ 24Vdc,  140 mA max @ 24Vac with all options
Protection Circuitry......................................................Reverse voltage protected, overvoltage protected
Operation Conditions...................................................0°-50°C (32°-122°F), 0-95% RH non-condensing.
Sensor Coverage Area..................................................100 m² (1000 ft²) typical
Wiring Connections.......................................................Screw terminal block (14 to 22 AWG)
External Dimensions......................................................Space: 84mm W x 119mm H x 29mm D (3.3″ x 4.7″ x 1.15″)
                                                                               Duct: 145mm W x 100mm H x 63mm D (5.7″ x 3.95″ x 2.5″)
                                                                               Duct Probe: 177mm (7″) long x 25.4mm (1″) diameter
Enclosure Ratings..........................................................**Space:** IP30 (NEMA 1)
                                                                               **Duct:** IP65 (NEMA 4X)

### CO2 Signal:

Measurement Type.........................................................Non-Dispersive Infrared (NDIR), diffusion sampling
Range...............................................................................0 - 2000 ppm
Standard Accuracy.........................................................±75 PPM @ 1000 ppm @ 22°C (72°F) when compared to certified calibration gas
Temperature Dependence.............................................0.2% FS per °C
Stability...........................................................................< 2 % FS over life of sensor (15 years typical)
Pressure Dependence.....................................................0.13% of reading per mm Hg
Altitude Correction........................................................Programmable from 0-5000 ft via BACnet® or ModBus
Response Time.................................................................<2 minutes for 90% step change typical
Warm-up Time.................................................................<2 minutes

### BACnet® Interface:

Hardware.........................................................................2-wire RS-485
Software...........................................................................Native BACnet® MS/TP protocol
Baud Rate........................................................................Locally set to 9600, 19200, 38400 or 76800
MAC Address Range........................................................Locally set to 0-127 (factory default is 3), (63 devices max on one daisy chain)

### ModBus Interface:

Hardware.........................................................................2-wire RS-485
Software...........................................................................Native ModBus MS/TP protocol (RTU or ASCII)
Baud Rate........................................................................Locally set to 300, 600, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 76800 or 115200
Slave Address Range......................................................Locally set to 0-64 (factory default is 1), (32 devices max on one daisy chain)

### Optional Temperature Signal:

Sensing Element.............................................................10K thermistor, ±0.2°C (±0.4°F)
Resolution........................................................................0.1°C  (0.2°F)
Range...............................................................................0° to 35°C (32° to 95°F)

### Optional RH Signal:

Sensing Element.............................................................Thermoset polymer based capacitive
Accuracy..........................................................................± 2% RH
Range...............................................................................0 - 100% RH, non-condensing
Resolution........................................................................1% RH
Hysteresis........................................................................± 3% RH
Response Time.................................................................15 seconds typical
Stability...........................................................................± 1.2% RH typical @ 50% RH in 5 years

### Optional Relay Output:

Contact Ratings..............................................................Form A contact (N.O.), 2 Amps @ 140 Vac, 2 Amps @ 30 Vdc
Relay Trip Point..............................................................Programmable 500-1500 ppm via BACnet® or ModBus
Relay Hysteresis.............................................................Programmable 25-200 ppm via BACnet® or ModBus

### Optional LCD Display:

Resolution........................................................................1 ppm CO2, 1% RH, 1°C (1°F)
Size...................................................................................1.4″ w x 0.6″ h (35 mm x 15 mm) alpha-numeric 2 line x 8 character
Backlight..........................................................................Enable or disable via keypad

**Optional Override Switch**...........................................Front panel push-button available as BACnet® object or ModBus register

**Optional Setpoint Control**.........................................Front panel push-buttons available as 0 to 100% as BACnet® object or ModBus register

GREYSTONE ENERGY SYSTEMS, INC.

BTL  RoHS COMPLIANT  MADE IN CANADA  ISO9001  CE

## FEATURES:

- Menu driven set-up
- 0-2000 PPM $CO_2$ range
- BACnet® or Modbus Communication
- Patented self-calibration algorithm
- Guaranteed 5 year calibration interval
- Easily field calibrated
- Accepts AC/DC power

## OPTIONS:

- LCD
- Humidity and/or Temperature
- Setpoint Adjustment
- Override Switch
- Control relay
- Custom Logos

## PRODUCT ORDERING INFORMATION:

| MODEL | Description |
|---|---|
| CDD3A | Carbon Dioxide Detector ($CO_2$), Non-Dispersive Infrared (NDIR) sensor w/ BACnet® Communications |
| CDD3B | Carbon Dioxide Detector ($CO_2$), Non-Dispersive Infrared (NDIR) sensor w/ Modbus Communications |

| CODE | Enclosure |
|---|---|
| 10 | Space |
| 20 | Duct |

| CODE | LCD Display |
|---|---|
| 0 | Concealed |
| 1 | Viewable |

| CODE | Configurations |
|---|---|
| - | CO2 Only |
| RH | CO2, Humidity and Temperature |
| T | CO2 and Temperature |

| CODE | Setpoint Adjustment (Available on Space only) |
|---|---|
| - | No Setpoint Adjustment |
| P | Setpoint Adjustment |

| CODE | Momentary Override (Available on Space only) |
|---|---|
| - | No Override |
| S | Override Switch |

| CODE | Relay Output |
|---|---|
| - | No Relay |
| R | Relay |

| CDD3A | 10 | 1 | RH | P | S | - | ← Typical Model Number |

**Example:** Space CO2, 0-2000 ppm w/ BACnet®, LCD, Setpoint Adjustment, & Override Switch

## BACnet® COMMUNICATION

BACnet® is a data communication protocol for building automation and control networks. The detector communicates on a standard 2-wire RS-485 MS/TP (master-slave/token-passing) network designed to run at speeds from 9600 to 76800 baud over twisted pair wiring.

BACnet is a registered trademark of ASHRAE. ASHRAE does not endorse, approve or test products for compliance with ASHRAE standards. Compliance of listed products to the requirements of ASHRAE Standard 135 is the responsibility of BACnet International (BI). BTL is a registered trademark of BI.

## MODBUS COMMUNICATION

Modbus is a network protocol for industrial manufacturing environments. The detector communicates on a standard Modbus network using either of two transmission modes: RTU (Remote Terminal Unit) or ASCII (American Standard Code for Information Interchange). The hardware interface is RS-485. Select the desired mode along with the other parameters using the Configuration Menu.

# ACLP SOFTWARE AND 5-YEAR CALIBRATION GUARANTEE

### ACLP SOFTWARE

**ACLP** (Automatic Calibration Logic Program) software utilizes the computing power in the sensor's on-board microprocessor to remember the lowest $CO_2$ concentration that takes place every 24 hours. The sensor assumes this low point is at outside levels. The sensor is also smart enough to discount periodic elevated readings that might occur if for example a space was used 24 hours per day over a few days. Once the sensor has collected 14 days worth of low concentration points, it performs a statistical analysis to see if there has been any small changes in the sensor reading over background levels that could be attributable to sensor drift. If the analysis concludes there is drift, a small correction factor is made to the sensor calibration to adjust for this change.

### 5-YEAR CALIBRATION GUARANTEE

Based on the results of years of testing of ACLP software, Greystone now offers a 5-year calibration guarantee on all its CDD series wall and duct mount sensors used for $CO_2$ based ventilation control when operated in an environment that can utilize ACLP software. If the sensor is found to be out of calibration more than 150 PPM as compared to a calibration gas or recently calibrated reference, Greystone will provide a free factory calibration of the sensor if returned to Greystone. This guarantee only applies if the sensor is operated in an environment where inside levels periodically drop to outside concentrations (i.e. during evenings or weekends when there is no occupancy) as is required by ACLP software. If a space does not experience a periodic drop to outside levels (i.e. where occupancy is 24 hours, 7 days/week), ACLP software should be deactivated. With ACLP deactivated, calibration may be required every 2 to 3 years.
